

## **The Project Protection for Builders and Investors**

Avoidance of cost and dead line overruns  
as well as quality and organization

### **SHORT PROFILE**

**What does Krauck Systems offer?**

Krauck Systems assumes the all inclusive responsibility for the content of plans across all specialist fields in every project phase. With this you are protected from cost and dead line overruns in accomplishing your project goals, which would otherwise arise through correction of planning afterwards or correction of building steps which were finished.

**Where is the difference to conventional strategies und tools?**

If in your projects up to now, despite specialized competence, contractual regulation, written validation and application of complex tools, deficits of the content of the plans are discovered only at the construction site, and this leads to disputes, defects, delays and cost overruns, Krauck Systems offers you established solutions.

Krauck Systems insures in writing, as the responsible Integrator of the comprehensive alignments of all trades, completeness, conformity of standards of all contents and all authors of all plans.

This is accomplished with the established KS technology since 20 years (KS-Real-Data-Total System, KS-Datawall, central KS-Model, Project-Coordination-System, eg).

Therewith the construction site is realized in fast motion already in the planing phase and conflicts during the construction process are eliminated timely before the assignment of the construction services.

This produces the transperance which among others increases the quality of decision and planing, as well as reducing the project time by minimizing of conflicts and mistakes.

Furthermore the quality, efficiency and economy is increased through realistic and conflict-free project data, in all construction services during the entire life cycle of the building.

**For what types of projects are the solutions used KRAUCK-SYSTEMS?**

KRAUCK-SYSTEMS solves with their technologies the main problem for construction cost and time overshots of all types of projects (high-civil engineering, automotive industry, refinery, chemical, etc.).

**Who profits from the solutions of the KS?**Building Owners

by proper basis for decisions as well as control of sequences in all project phases.

All project participants

by preventing of redundant personal efforts through avoidance of conflicts, mistakes and disputes.

Architects and Technical Planers

by avoidance and timely recognition of conflicts of contents of plans across all trades.

Contractors

by conflict-free basis of assembly and fabrications as well as trouble free construction sequences.

Operators of realized objects

through realistic and CAFM- conform as-build documents and operating business data.

**How are the solutions of KS integrated in the project?**

In addition to an cooperation with previous participants, KS is responsible for the permanent integration of all interim and end results. Thereby trouble zones spotted by KS are shown to the participants in an positive effect to the whole, as well as there entire elimination for the benefit of all is monitored and documented.

**How much do the solutions of KS cost?**

When timely integrated in the project sequence, the projects done with Krauck Systems do not cost more than conventional planning and project controlling services.
